

# PLUTO

- PLUTO is a completely new and innovative way of processing imagery and video
- PLUTO is unique in its ability to provide a wide variety of enhanced applications due to its modular design and service oriented implementation
- PLUTO can be implemented to operate in real-time (embedded), near real-time (distributed over a network), offline (highly distributed over a network) or any combination of the three
- PLUTO is enabled by many innovations such as the new Fast Search Algorithm which allows the system to search many millions of object similarities in seconds
- PLUTO is dynamic enough to compete with a broad spectrum of products on the market such as L1's Identity Solution Line, Autonomy's Image Search, and ObjectVideo's Intelligent Video Surveillance application with a single platform
- PLUTO's framework enables a "develop once" and "implement many ways" strategy
- PLUTO is available now
