STARFace™ Software Development Kit (SDK)

(Eatontown, NJ) October 27, 2009 - STAR Technologies LLC, announces the release of the STARFace™ Software Development Kit (SDK) that facilitates building custom biometrics solutions employing face recognition. The unique STARFace™ algorithms make it categorically superior to other face recognition technologies in the market when applied in uncontrolled environments and at standoff distances. This makes STARFace™ especially suited for applications such as proactive surveillance, physical access control, video surveillance, and border control. The unique STARFace™ technology is easily extensible for detection or tracking of any object or target of interest.

“We are proud that our dedicated and talented Research and Development Team has created a product based on DSCI’s innovative patent-pending technology which is designed for biometric identification in uncontrolled settings,” says Dr. Christine Podilchuk, Director of Biometrics and Analytics at DSCI. “We can provide the best-in-class solutions for stand-off, surveillance and other real world applications for our customers.”
